AMENDMENT UNDER 37 C.F.R. § 1.116 Attorney Docket No.: Q65705

Appln. No.: 09/961,273

AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions and listings of claims in the

application:

LISTING OF CLAIMS:

1. (currently amended): An electromagnetic device used in a case containing oil,

said electromagnetic device comprising:

an electromagnetic device body including a coil formed with a conductor wound around a

bobbin and a cover member enclosing said coil; and

a cover molded around said electromagnetic device body with a molding pressure,

said cover member protecting said coil from said molding pressure when said cover is

molded around said cover member;

wherein said bobbin is composed of a material having lubricating characteristics,

wherein the conductor is coated with an outer coating, and

wherein said outer coating comprises:

an insulating layer which is made of enamel formed over the conductor; and

a welding layer which is made of thermoset epoxy formed over the insulating

<u>layer</u>.

2. (canceled).

3. (canceled).

-2-

AMENDMENT UNDER 37 C.F.R. § 1.116 Attorney Docket No.: Q65705

Appln. No.: 09/961,273

4. (canceled).

5. (canceled).

6. (canceled).

7. (canceled).

8. (previously presented): An electromagnetic device according to Claim 1, wherein the thickness of an outer coating of said conductor exceeds the size of a flash produced on said bobbin.

9. (previously presented): An electromagnetic device according to claim 1, wherein the electromagnetic device is a motor.

10. (previously presented): An electromagnetic device according to claim 1, wherein the electromagnetic device is a transmission control valve.

11. (previously presented): An electromagnetic device according to claim 1, wherein the electromagnetic device is used in a case containing oil.

12. (canceled).

13. (canceled).

14. (canceled).

15. (previously presented): An electromagnetic device according to claim 1, wherein a tip of a flash of the bobbin does not reach the conductor due to a thickness of said outer coating.

AMENDMENT UNDER 37 C.F.R. § 1.116

Appln. No.: 09/961,273

16. (previously presented): An electromagnetic device according to claim 1, further comprising:

a pair of coils opposing each other,

wherein said pair of coils are enclosed by the cover member.

- 17. (previously presented): An electromagnetic device according to claim 1, wherein said cover member is cylindrical in shape.
- 18. (currently amended): An electromagnetic device used in a case containing oil, said electromagnetic device comprising:

an electromagnetic device body including a coil formed with a conductor wound around a bobbin and a cover member enclosing said coil; and

a cover molded around said electromagnetic device body with a molding pressure,

wherein said cover member comprises a means for protecting said coil from being directly subjected to molding pressure when said cover is formed by injection molding, by covering said coil;

wherein said bobbin is composed of a material having lubricating characteristics,

wherein the conductor is coated with an outer coating, and

wherein the thickness of said outer coating of said conductor exceeds the size of a flash produced on said bobbin;

wherein said outer coating comprises:

an insulating layer which is made of enamel formed over the conductor; and

AMENDMENT UNDER 37 C.F.R. § 1.116 Attorney Docket No.: Q65705

Appln. No.: 09/961,273

a welding layer which is made of thermoset epoxy formed over the insulating layer.

19. (currently amended): An electromagnetic device used in a case containing oil, said electromagnetic device comprising:

an electromagnetic device body including a coil formed with a conductor wound around a bobbin and a cover member enclosing said coil; and

a cover molded around said electromagnetic device body with a molding pressure,

said cover member having a material strength sufficient to protect said coil from being directly subjected to said molding pressure when said cover is molded around the cover member;

wherein said bobbin is composed of a material having lubricating characteristics, wherein the conductor is coated with an outer coating,

wherein the thickness of said outer coating of said conductor exceeds the size of a flash produced on said bobbin;

wherein said outer coating comprises:

an insulating layer which is made of enamel formed over the conductor; and a welding layer which is made of thermoset epoxy formed over the insulating layer.

- 20. (canceled).
- 21. (currently amended): An electromagnetic device according to claim 201, further comprising:

AMENDMENT UNDER 37 C.F.R. § 1.116

Appln. No.: 09/961,273

a plurality of adjacent conductors, wherein said welding layer bonds said plurality of adjacent conductors to each other.

Attorney Docket No.: Q65705

- 22. (new): The electromagnetic device according to claim 1, wherein the bobbin is lubricated with one of silicon and oil.
- 23. (new): The electromagnetic device according to claim 1, wherein the bobbin comprises polytetrafluoroethylene.
